

Investment Analysis

Executive Summary

With the new changes to Client Focused Reforms (CFR), BMO aims to support Registered Individuals with information about the recommended securities and tools to help address the Know Your Product (KYP) and Suitability expectations and guidelines. With consideration to understanding client-investment suitability, Registered Individuals must be able to demonstrate their assessment and understanding of a reasonable range of alternative securities made available through the firm.

To make a suitability determination, Registered Individuals need to take reasonable steps to understand the securities that they purchase, sell, or recommend for a client, including the initial and ongoing costs associated with acquiring and holding each security, the security's structure, features, and risks, and the impact of the action on their clients' accounts, including liquidity, concentration, and the actual and potential impact of costs on the client's return. Registered Individuals also must obtain approval from the firm to offer the security to their client.

In addition to putting their clients' interests first, the ability to meet the KYP requirements is pertinent to making a suitability determination. The Registered Individual must provide a reasonable range of alternative actions available at the time of determination. This refers to a suitable range of comparable securities that are available through the firm that fall within a similar risk level, suitability, and category when compared to a client's risk profile. Once these requirements are met, the Registered Individual may then present this recommendation to their client.

Completion of all the above KYP requirements should be recorded in a format that can be readily provided to regulating bodies upon request to ensure that adequate steps were taken. With the following presentation and checklist, it can help evidence that KYP obligations have been completed in order to conduct a suitability determination.

KYP Checklist

Has the security been approved by the firm to be made available to the client?

Have reasonable steps been taken by the Registered Individual to understand the securities to enable a suitability determination?

Has the risk rating of the recommendation and the impact of the action on the client's account been evaluated?

Has a reasonable range of alternative products been reviewed within the comparison at the time of the suitability determination?

Commentary

BMO Covered Call Canada High Dividend ETF Fund has a Medium risk rating and is built for investors looking for pure exposure to Canadian dividend paying companies. The covered call writing provides additional yield on a monthly basis for clients looking for an enhanced level of income to fund their lifestyle needs. The overall result is a cash flow and growth strategy, based on a variety of reliable dividend paying sectors within the Canadian Market.

Covered Call Writing Execution:

- Calls are written on ~50% of the portfolio
- 50% of the Portfolio has long exposure to Canadian Dividend paying companies with no upside ceiling.
- The call writing on avg. provides an additional 150-200bps of current yield.
- Calls are written 2-4% Out of The Money (OTM) and are typically: 75% 30 days out , 25% 60 days out
- No calls are written out more than 60 days allowing changes in market volatility to be captured as quickly as possible.

Relative to the included peer group the BMO Covered Call Canada High Dividend ETF Fund has:

- the highest allocation to Canadian equity holdings
- the highest distribution yield
- the lowest MER at 0.73% (approx. 30%-40% less expensive than the peer group)

Summary:

The BMO Covered Call Canada High Dividend ETF Fund is an attractive solution for clients looking for a Medium risk, cash flow and growth strategy that provides pure exposure to Canadian High Dividend paying equities with an enhanced yield that is paid on a monthly basis.

Glossary

Alpha

Alpha is a measure of performance. It indicates when an investment has beaten the market over a period of time.

Beta

Beta is used as a measure of volatility of an investment compared to the risk of the entire market. A score of 1 indicates the investment is as volatile as the market. Less than 1 indicates it is less volatile than the market.

Consistent Return

The Lipper Rating for Consistent Return identifies a fund that has provided relatively superior consistency and risk-adjusted returns when compared to a group of similar funds. Funds which achieve high ratings for Consistent Return may be the best fit for investors who value a fund's year-to-year consistency relative to other funds in a particular peer group.

Investors are cautioned that some peer groups are inherently more volatile than others, and even Lipper Leaders for Consistent Return in the most volatile groups may not be well suited to shorter-term goals or less risk-tolerant investors.

Information Ratio

Information Ratio measures a portfolio's return beyond the returns of a benchmark and compares it to the volatility of the returns.

Lipper Leader Scores

<http://www.lipperleaders.com/quickinfo.aspx>

Funds are ranked against their Lipper peer group classifications each month for 3-, 5-, 10-year, and overall periods. These ratings are based on an equal-weighted average of percentile ranks of the five Lipper Leaders metrics.

For each metric:

- the top 20% of funds receive a rating of '5' and are named Lipper Leaders;
- the next 20% of funds receive a rating of '4';
- the middle 20% of funds receive a rating of '3';
- the next 20% of funds receive a rating of '2';
- the lowest 20% of funds receive a rating of '1'.

Lipper Leaders provide context and perspective for making informed investment decisions but do not predict future performance.

Management Expense Ratio

Management Expense Ratio ("MER") indicates how much a fund pays in management fees, operating expenses, taxes, and potentially commissions to advisors.

Maximum Drawdown

Maximum Drawdown is the maximum compounded loss an investment incurred during a period.

Portfolio Correlation

Portfolio Correlation measures how much two investments move relative to each other. Correlation falls between -1.0 and 1.0.

Preservation

Choosing a Lipper Rating for Preservation may help to minimize downside risk relative to other fund choices in the same asset class. Investors are cautioned that equity funds have historically been more volatile than mixed-equity or fixed-income funds, and that even the Lipper Rating for Preservation in more volatile asset classes may not be well suited to shorter-term goals or less risk-tolerant investors.

R-Squared

R-squared measures what percentage of an investment's performance is caused by movements in its benchmark. R-squared values range from 0 to 100%.

Sharpe Ratio

Sharpe Ratio describes how much excess return an investment produces relative to its volatility.

Sortino Ratio

Sortino Ratio describes how much excess return an investment produces relative to its downside volatility.

Standard Deviation

Standard Deviation measures the historical volatility of an investment. It compares the variance of performance relative to its average over time.

Total Return

The Lipper Rating for Total Return denotes a fund that has provided superior total returns (income from dividends and interest as well as capital appreciation) when compared to a group of similar funds.

Tracking Error

Tracking Error is the difference between the standard deviation of a fund and its benchmark. It is used to indicate how closely a fund replicates a benchmark.

Upside/Downside Capture

Upside/Downside Capture is a measure of an investment's performance during positive and negative market periods. It's used to determine how well an investment performed during periods where market returns have been positive or negative. It's presented as a percentage.

The KYP Tool is provided to Financial Advisors only, for educational and informational purposes only and solely as a tool for advisors to support the assessment of investment suitability for investors. Investors are expected to consult their advisors to determine suitability for their investment objectives and portfolio. The information, analysis and opinions expressed herein are for general information only and are not intended to provide specific advice or recommendations for any individual security. Please note that the information presented may not be appropriate for all. The KYP Tool is not intended to be an exhaustive or definitive examination, professional advice should be obtained.

Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments and the use of an asset allocation service. Please read the fund facts or prospectus of the mutual funds in which investment may be made before investing, including mutual fund investments under an asset allocation service. The indicated rates of return (other than for each money market fund) are the historical annual compounded total returns assuming the investment strategy recommended by the asset allocation service is used and after deduction of the fees in respect of the service. The returns are based on the historical annual compounded total returns of the participating funds including changes in unit value and reinvestment of all distributions and does not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder in respect of a participating fund that would have reduced returns. In case of BMO Money Market Fund note that mutual fund securities are not covered by the Canada Deposit Insurance Corporation or by any other government deposit insurer. There can be no assurances that the Fund will be able to maintain its net asset value per security at a constant amount or that the full amount of your investment in the fund will be returned to you. Past performance may not be repeated. The indicated rate of return for each money market fund is an annualized historical yield based on the seven-day period ended as indicated and annualized in the case of effective yield by compounding the seven-day return and does not represent an actual one-year return.

Risk tolerance measures the degree of uncertainty that an investor can handle regarding fluctuations in the value of their portfolio. The amount of risk associated with any particular investment depends largely on your own personal circumstances including your time horizon, liquidity needs, portfolio size, income, investment knowledge and attitude toward price fluctuations. Investors should consult their financial advisor before making a decision as to whether this Fund is a suitable investment for them.

For a summary of the risks of an investment in BMO Mutual Funds, please see the specific risks set out in the prospectus.
