

BMO Tactical Balanced ETF Fund Highlights

Core Tactical/Strategic Portfolio Outlook/Adjustments

We started to see a bit of selling in large cap tech and a broadening out of the rally last week as the market broke out of resistance around 4200 on the S&P 500 and the NASDAQ 100 (QQQ) showed some resistance. In theory, the 4200 area should act as strong support for a while so a close back below 4100 would be very bearish. Until that happens, the market is in a more positive mode. That said, the market rejected the next resistance test of the 4320 area (Aug/22 high and 61.8% retracement see chart). A pullback to 4000 (the rising 200-day average is likely in the coming months. On the test of this key resistance, we rolled up the put protection from 4100 to 4300 on the S&P 500 hedge. We also reduced exposure to Japan (FLJH, ZDM) that has been helping EAFE markets lead the world this year and rebalanced back into equal weight US (RSP) and emerging markets (ZEM) that has been lagging YTD.

Macro Market Strategy

We think this is a very two-way market for the next few quarters with a bearish tilt. QT should start to weigh on risk premiums going forward, but there is massive cash balances sitting in the RRP to offset a significant impact. The FOMC's more aggressive path (higher for longer) is now facing some systemic risks as the rapid rate hikes that have impacted bank balance sheets have tightened financial conditions. We expect the FOMC to raise rates 25 bps at the May meeting and suggest more may be needed and that they remain data dependent. There are indications that the economy is weakening and the FOMC's own staff believe a recession is likely later in 2023. This does not mean they will ease until financial conditions tighten enough to remove the risk of inflation expectations increasing. We think this means economic pain in the labour markets, which we have not seen yet. "Gradually and then suddenly." Hemingway 1926.

PRO-EYES - Berman's Call

Risk Level **Low**

The core portfolio beta is 78.2%. The degree of delta protection is -65% while the value of beta protection is 2%. The weighted average cap is: 4400. The weighted average collar is: 4300. The weighted average floor is: 0.

The tactical PRO-EYES factor suggests that while some caution is still warranted on business cycle and valuation and that we are likely in a bear market cycle, the tactical component suggests lots of two-way opportunity is likely. The February and March weakness has moved the tactical component to oversold levels.

Performance Metrics (A-Series) as of (06/09/23)

"Forward-looking statements," can be identified by the use of forward-looking terminology such as "may", "should", "expect", "anticipate", "outlook", "project", "estimate", "intend", "continue" or "believe" or the negatives thereof, or variations thereon, or other comparable terminology. Investors are cautioned not to place undue reliance on such statements, as actual results could differ materially due to various risks and uncertainties.

1 Benchmark is the return of the targeted portfolio 60% global equities and 40% global bonds hedged to Canadian dollars; 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period.
