

BMO Tactical Balanced ETF Fund Highlights

Core Tactical/Strategic Portfolio Outlook/Adjustments

We continue to actively trade duration in the bond portion of the portfolio. Duration increased 1.26 years. We have added value this year given total returns on long bonds are negative on the year. We have yet to see the equal weight (RSPT) technology ETF respond to the higher yields we are experiencing. We think that is the next leg to the cycle and we should see a significant mean reversion relative to the trends since May. We remain underweight equity duration and look to build a full 20% position in long term treasuries over the next year.

Macro Market Strategy

Our macro indicators suggest a high degree of caution. We believe the message in the yield curve is a hard landing. However, market positioning is very different. While central banks have tried to tighten financial conditions, equity indexes are significantly offsetting until recently. The impact of QT and huge coupon supply in the coming years should push risk premiums higher. Based on the current S&P 500 EPS, the fair value is closer to 3600 than 4600. Globally, there remains much better value in stocks globally and the average stock is not extremely overvalued like the large cap tech driven US market. The MSCI world equal weight index has outperformed the market cap index over the past 20 years, but not the past 10 years. Large cap tech should be multiple challenged in a higher for longer world.

Chart of the Week

PRO-EYES - Berman's Call

Risk Level **Low**

The core portfolio beta is 79.5%. The degree of delta protection is -73% while the value of beta protection is 80% of the portfolio. The weighted average cap is: 4400. The weighted average collar is: 4300. The weighted average floor is: 0.

The overall PRO-EYES factors suggest that we are in a period of caution. The most recent extreme readings suggests that we have a high probability of a correction of more than 11% from the recent peak. Timing is uncertain, but typically within 3 to 6 months.

"Forward-looking statements," can be identified by the use of forward-looking terminology such as "may", "should", "expect", "anticipate", "outlook", "project", "estimate", "intend", "continue" or "believe" or the negatives thereof, or variations thereon, or other comparable terminology. Investors are cautioned not to place undue reliance on such statements, as actual results could differ materially due to various risks and uncertainties.

1 Benchmark is the return of the targeted portfolio 60% global equities and 40% global bonds hedged to Canadian dollars; 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period.

ETF Capital Management is a registered trade name of Quintessence Wealth, a Portfolio Manager, Investment Fund Manager and Exempt Market Dealer registered with the Canadian Securities Administrators. Commissions, trailing commissions (if applicable), management fees and expenses all may be associated with mutual fund investments. Please read the fund facts or prospectus of the relevant mutual fund before investing. The indicated rates of return are the historical annual compounded total returns for the period indicated including changes in unit value and reinvestment of all distributions and does not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated. Distributions are not guaranteed and are subject to change and/or elimination.
