

BMO Tactical Global Growth ETF Fund

Core Tactical/Strategic Portfolio Outlook/Adjustments

With the PRO-EYEs indicators flashing high caution signals, we are well positioned to protect the portfolio. We have been in high defense mode since February and see no reason to change that positioning. Our macro models suggest a high probability of a hard landing. Unless valuation improves, a defensive stance makes the most sense. In early August, for the first time since February, we saw a weekly close on the S&P 500 below the previous week's low. This continued last week. Historically, this is a reliable signal that the current trend has likely peaked. We made no trades last week as the portfolio is in max defensive mode.

Macro Market Strategy

Our macro indicators suggest a high degree of caution. We believe the message in the yield curve is a hard landing. However, market positioning is very different. While central banks have tried to tighten financial conditions, equity indexes are significantly offsetting. Debt financing is being done in the Bills market, which is favourable for risk premiums. While the behaviour of the tape is encouraging as breadth improves, the leadership stocks remain at extreme valuations. We expect central banks' message of higher for longer should eventually cause a hard landing. The end of the business cycle is a process not an event. We maintain a high degree of protection in the portfolio, which has been a negative in Q2. The market is looking forward to an easing cycle and we believe inflation trends will limit the ability to stimulate compared to past cycles (post 1980s).

PRO-EYEs Indicators

Risk Level Low-Med

The core portfolio beta is 89.0%. The degree of delta protection is -70% while the value of beta protection is 74% of the portfolio. The weighted average cap is: 4400. The weighted average collar is: 4300. The weighted average floor is: 0.

The overall PRO-EYEs factors suggest that we are in a period of very high caution. Tactically, we are seeing some extreme overbought readings that suggest a high probability of a correction of more than 11% is likely.

Performance Metrics (A-Series) as of (08/11/23)

This update has been prepared by ETF Capital Management, the portfolio manager of BMO Tactical Global Growth ETF Fund and represents their assessment at the time of publication. The views are subject to change without notice as markets change over time. The information contained herein is not, and should not be construed as, investment advice to any party. Investments should be evaluated relative to the individual's investment objectives and professional advice should be obtained with respect to any circumstance. Any statement that necessarily depends on future events may be a forward-looking statement. This material may contain forward-looking statements. "Forward-looking statements," can be identified by the use of forward-looking terminology such as "may", "should", "expect", "anticipate", "outlook", "project", "estimate", "intend", "continue" or "believe" or the negatives thereof, or variations thereon, or other comparable terminology. Investors are cautioned not to place undue reliance on such statements, as actual results could differ materially due to various risks and uncertainties. 1 The benchmark is the return of the targeted portfolio. 2 Beta is a measure of how a fund responds to moves in the broader market. A beta of greater than 1.0 suggests that the fund is more volatile than the market, while a beta of less than 1.0 suggests that the fund is less volatile. 3 Yield is the most recent income received by the fund in the form of dividends, interest and other income annualized based on the payment frequency, divided by the current market value of the fund's investments. 4 Volatility is the annualized standard deviation which is a measure of risk. 5 Upside/Downside is a statistical measure of how much of the fund performance a manager captured during up-markets or down-markets. Typically, an investor would prefer a higher upside capture and lower downside capture. The time period presented is since inception. 6 Standard Deviation is a measure of risk that calculates the variation of a fund's performance around its average over a specific time period. ETF Capital Management is a registered trade name of Quintessence Wealth, a Portfolio Manager, Investment Fund Manager and Exempt Market Dealer registered with the Canadian Securities Administrators. Commissions, trailing commissions (if applicable), management fees and expenses all may be associated with mutual fund investments. Please read the fund facts or prospectus of the relevant mutual fund before investing. The indicated rates of return are the historical annual compounded total returns for the period indicated including changes in unit value and reinvestment of all distributions and does not take into account sales, redemption, distribution or optional charges or income taxes payable by any unitholder that would have reduced returns. Mutual funds are not guaranteed, their values change frequently and past performance may not be repeated. Distributions are not guaranteed and are subject to change and/or elimination.
